ozenebral@gmail.com  
www.linkedin.com/in/ebiral-özen-55017b213  
İstanbul / Üsküdar, Turkey

### SKILLS

- HTML5, CSS3 and JavaScript (ES6+)
- Developing modern web applications with Vue.js framework
- Building powerful backend systems with Laravel framework
- RESTful API design and development
- PHP
- Database management (SQL)
- UI/UX design and user experience optimization
- Server-side development with technologies like Node.js
- Version control systems (like Git)
- Responsive design and mobile-friendly web development
- Project management and time management
- Ability to collaborate as a good team player
- Prototyping and design collaboration with Figma or similar tools
- User interface development with CSS frameworks such as Tailwind CSS and Bootstrap
- Package managers: npm and yarn

### EDUCATION

#### MARMARA UNIVERSITY

#### Computer Technology

2018 - 2021

### LANGUAGES

English

### PROFILE

I'm Ebral, I started my career as a front-end developer in 2020 and gained in-depth experience in PHP and JavaScript languages with frameworks such as Laravel and Vue.js. I specialized in developing modern and user-friendly interfaces with tools such as Bootstrap, jQuery and Lodash.

Thanks to my mastery of responsive design principles, I design web applications that are mobile-friendly and provide effective user experience. I focus on creating customer-oriented solutions, closely follow the innovations in the world of technology and implement them in my projects.

With my problem-solving skills and analytical thinking ability, I am successful in solving complex problems. As a good team player, I focus on cooperation and common goals and aim to maximize my contributions in projects.

### WORK EXPERIENCE

#### FULL-STACK DEVELOPER

June 2020 - November 2023

##### Team Procure

During my time at the company, I took part in important projects such as Rönesans Holding, Kalyon Holding, Yapı Yapı İnşaat, Sourcing Value and Housing Mobilization. In these projects, I took an active role in the development of systems covering e-tender, e-procurement, progress payment, accounting and logistics modules. I managed back-end development using the Laravel framework and also took part in the optimization processes by packaging modern JavaScript and CSS codes with Webpack. In this way, I ensured that the code runs more efficiently and performant.

I focused on improving the user interface and experience by using popular libraries such as Axios, lodash, jQuery in my Laravel-based projects. I managed code changes and facilitated collaboration with version control systems such as Git. I also contributed to UI design and collaboration processes through Figma, collaborating with key clients to meet the design requirements of projects.

By participating in regular team meetings, I analyzed complex problems and developed solution-oriented approaches. Through this approach, I focused on identifying and fixing potential bugs early and ensured the successful completion of critical projects. Acting as a full-stack developer, I analyzed system bugs and managed the flow, responded to user feedback and made improvements as needed. I also ensured system UI/UX design and compatibility, managed the security and security processes.

#### FULL-STACK DEVELOPER

December 2023 - Still

##### Manc Games

During the time I worked for the company, I took part in projects such as Haber365 and provided various developments using Vue.js and Laravel frameworks as a full stack developer. I gained experience in both back-end and front-end development processes and developed user-friendly and functional web applications by integrating these technologies effectively.

I have effectively managed data management by modularizing applications as component-based with Vue.js and state management tools such as Vuex. I optimized development processes by actively using JavaScript libraries such as Axios, Lodash and jQuery in my projects.

I undertook back-end development using the Laravel framework. With Eloquent ORM, I was able to easily manage database operations and create RESTful APIs to communicate data between applications. Using Docker, I increased the portability and cross-environment compatibility of projects.

I also used a modern development tool like Vite to ensure fast development and compilation of projects, making the development process more efficient and providing a faster and smoother experience for users.
